

## Company news

### ► New website

Our company boasts a fresh affair; we have a new website! You will find it on the same domain as before : [www.bdsensors.cz](http://www.bdsensors.cz) , but in a nicer and fresh design .

Apart from the appearance, the most crucial difference is that we now manage the Czech version as well as the English version. The versions are identical in content and can be accessed with a single click : →  en

There are also minor differences in the structure of the site; eg the Switches section is no longer in a separate tab, but you will find it in other sections.

In the future, we are preparing an introductory page common to BD SENSORS s.r.o. and BD|SENSORS GmbH, where customers from all over the world will be directed to the right branch.

If you have any questions or requests to modify our website, please contact the marketing department → [Erika.Zavrelova@bdsensors.cz](mailto:Erika.Zavrelova@bdsensors.cz) .

Follow BD SENSORS on social networks too!

## Company news

### ► Space project EOLEO

is currently negotiating in France together with colleagues from the BSTG consortium (Brno Space Technology Group = Frentech Aerospace Brno + 5M Kunovice + LKE Brno + BD SENSORS Buchlovice) with one of the 3 largest companies for the European Space supplies the whole large satellites to ESA.

The project represents development and production of the so-called "Flexible Solar Array" operating on a revolutionary new development technology of solar panels for satellites providing the supply of electricity.

If the BSTG consortium manage to sign the contract with the customer, it will probably be the largest delivery in the modern history of the Czech space industry since the Czech Republic's accession to ESA in 2008 from a technical and commercial point of view.

The role of BD SENSORS in this project is to become the supplier of complete electrical cabling, the so-called „Electrical Harness“.
