

## Industry Space Days 2022

In October 28-29, 2022, the largest event in the field of European Space Business Development called ESA Industry Space Days took place. Everything happened in the technological heart of the European Space Agency ESA/ESTEC, in Noordwijk, the Netherlands.

Our company BD SENSORS was represented at this important event by colleagues Peter Debnár, Marek Šimčák and Luciano Battocchio, who took part in almost thirty business meetings there during these two days.

The main objective was the search for new business opportunities and potential contracts in the field of space technologies, which this demanding European market will offer in the coming years. The most important meetings can undoubtedly include the meetings with managers of strategic European giants such as Airbus, Ariane Group, Thales Alenia and many others.

The participation of BD SENSORS representatives can be evaluated as very successful, because in addition to the two newly acquired orders, several new opportunities were also negotiated, where BD SENSORS has the real chance of winning some new important contracts in the field of Space Electronics and Pressure measurement for Space applications.
