

IAC Paris 2022

This week, representatives of BD SENSORS participated in the 73rd International Astronautical Congress IAC Paris 2022. This is one important event that is the heart of the global space development and where all the important players of this entire industry meet. One of the main topics of the congress was the newly prepared orbital station in the orbit of the Moon, the so-called Lunar Gateway. We are proud to supply pressure sensors to the habitable module called I-HAB. On the congress, there was the presentation of our BDSat satellite presented as well as the interactive PEPE (PERoxide Propulsion Element) presentation.
